SUBJUNIT: EACH CLASS OF RNA POLYMERASE IS ASSEMBLED FROM TEN TO TWELVE DIFFERENT POLYPEPTIDES. THIS POLYPEPTIDE IS THE LARGEST COMPONENT OF RNA POLYMERASE II.

OMPONENT OF RNA POLYMERASE II.

SUBCELLULAR LOCATION: NUCLEAR.

INCLELLULAREOUS: THREE DISTINCT ZINC-CONTAINING RNA POLYMERASES AR FOUND IN EUKARYOTIC NUCLEI: POLYMERASE I FOR THE RIBOSOMAL RNA PRECURSOR, POLYMERASE II FOR THE MRNA PRECURSOR, AND POLYMERASE III FOR TS SAND TRNA GENES.

III FOR 55 AND TRNA GENES.

(POTENTIAL).

DISEASE: PEMPHIGUS VULGARIS (PV) IS A POTENTIALLY LETHAL SKIN DISEASE IN WHICH EPIDERWAL BLISTERS OCCUR AS THE RESULT OF THE LOSS OF CELL-CELL ADHESION CAUSED BY THE ACTION OF AUTOANTIBODIES AGAINST DSG3.

SIMILARITY: BELONGS TO THE CADHERIN FAMILY. DESMOSOMAL SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE

BUXTON R.S., MAGEE A.I.;
"Desmosomal glycoprotein DGI, a component of intercellular desmosome junctions, is related to the cadherin family of cell adhesion molecules.";

Proc. Natl. Acad. Sci. U.S.A. 88:4796-4800(1991).

PROC. NATLON: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS.
INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL MEMBRANE PROTEIN.

PROC. TISSUE SPECIFICITY: EPIDERMIS, TONGUE, TONSILAND ESOPHAGUS.

TONGENTAL CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS

No. is the number of results predicted by chance to have
score greater than or equal to the score of the result being po
and is derived by analysis of the total score distribution.

"Autoantibodies against a novel epithelial cadherin

"ulgaris, a disease of cell adhesion.";

Cell 67:869-877(1991).

-I- FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME J

INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS A

FILAMENTS MEDIATING CELL-CELL ADHESION.

-I- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I- TISSUE SPECIFICITY: EPIDERMIS, TONGUE, TONSIL, E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens (Human).

J. Cell Sci. 96:239-248(1990).

-: FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS. INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL ADHESION. MAY CONTRIBUTE TO EPIDERMAL CELL POSITIONING (STRATIFICATION) BY MEDIATING DIFFERENTIAL CELL ADHESIVENESS DIFFERENT ISOFORMS. LINKED TO THE KERATINIZATION OF EPITHELIAL TISSUES.

-! SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-! ALTERNATIVE PRODUCTS: TWO FORMS: 1A OR DG2 (SHOWN HERE) AND 1B OR DG3; ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE.
-! TISSUE SPECIFICITY: EPIDERMIS AND WEAKLY IN TONGUE PAPILLAE.
-! DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE: 91239591.

INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL ADHESION. MAY CONTRIBUTE TO EPIDEMAL CELL POSITIONING (STRATIFICATION) BY MEDIATING DIFFERNTIAL ADHESIVENESS BETWEEN CELLS THAT EXPRESS DIFFERNTIAL ADHESIVENESS BETWEEN CELLS THAT EXPRESS DIFFERNTIAL INKED TO THE KERATINIZATION OF EPITHELIAL TISSUES. SUBCELLULAR LOCATION: TYPE I THE TISSUES. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: TWO FORMS; 1A OR DG2 (SHOWN HERE) AND 1B OR DG3; ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE.

TISSUE PROTEITICITY: STRONGLY EXPRESSED IN EPIDERMIS, LESS IN LYMPH NOR AND STRONGLY STRONGLY EXPRESSED IN EPIDERMIS, LESS IN LYMPH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS (POTENTIAL).
SIMILARITY: BELONGS TO THE CADHERIN FAMILY. DESMOSOMAL SUBFAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mitted (JÜN-1997) to the EMBL/GenBank/DDBJ databases. FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS. THOSE PREFERENTIALLY INTERACT WITH THEMSETVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HEFTEROGENEOUS CELL TYPES. THIS CADHERIN MAY PLAY A IMPORTANT ROLE IN ENDOTHELIAL CELL BIOLOGY THROUGH CONTROL OF THE COHESION AND ORGANIZATION OF THE INTERCELLULAR JUNCTIONS. IT ASSOCIATES WITH ALPHA-CATENIN FORMING A LINK TO THE CYTOSKELETON

'A SUZUKI S., SANO K., TANIHARA H.;

'I Diversity of the cadherin family: evidence for eight new cadherins of the providence of the cadherins of the cadherins of the cadherins of the cadherins of the cadherins are calcium dependent cell adhesion proteins. C. -: FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.

'C THEY PREFERENTIALLY INTERACT MITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES.

'C SORTING OF HETEROGENEOUS CELL TYPES.

'C SUBCELLULAR LOCATION: TYPE IN MEMBRANE PROTEIN.

C -: SUBCELLULAR LOCATION: TYPE IN MEMBRANE PROTEIN.

C -: TISSUE SPECIFICITY: HIGHLY EXPRESSED IN BRAIN, CEREBELLUM, AND KIDNEY. LUNG, PANCREAS, AND GASTRIC MUCOSA SHOW A WEAK EXPRESSION.

C ALSO EXPRESSED IN CERTALN LIVER AND KIDNEY CARCINOMAS.

C -: SUMLARITY: BELONGS TO THE CADHERIN FAMILY.

"Cloning and expression analysis of cadherin-10 in the CNS of the chicken embryo.",

Dev. Dyn. 209:269-285(1997).

-!- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTE THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO SORTING OF HETEROGENEOUS CELL TYPES.

SORTING OF HETEROGENEOUS CELL TYPES.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-!- SIMILARITY: BELONGS TO THE CADHERIN FAMILY.

"Identification of human cadherin-14, a novel neurally specific type
II cadherin, by protein interaction cloning.";

J. Biol. Chem. 272:5236-5240(1997).

-i- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.

THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
MANUER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF HETEROGENEOUS CELL TYPES.

SORTING OF HETEROGENEOUS CELL TYPES.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-i- SIMILARITY: BELONGS TO THE CADHERIN FAMILY.
